Proposed Plans Could Prove Disastrous For New York

Get ready for higher energy prices, more blackouts, and huge conversion costs.

New York State's proposed climate action plans would force you to switch to electric cars, heat pumps, and stoves, no matter how much they cost, how poorly they perform, or how unreliable our electric grid becomes in the process. It is the most radical, untested plan in the country.

Take Action Now!

New York's Climate Action Council is accepting public comments on their proposed "scoping plans." **Make your voice heard.**

Tell the Climate Action Council NO to the higher energy prices and unreliable power!

While we support efforts to lower carbon emissions, proposed plans to “electrify everything” in New York would:

- Force families to spend **upwards of \$20,000** to convert their homes to electric heat pumps that struggle to keep you warm on cold winter days.
- Send energy costs soaring.
- Compromise an electric grid that already has **the most power outages in the mid-Atlantic region.**
- Impose new “Carbon Taxes” on all energy.
- All of this without much impact on the global climate.

Take Action Now!

New York’s needs a balanced energy plan that doesn’t put all its eggs in one fragile electric basket. Learn more at [SmarterNYenergy.org](https://www.SmarterNYenergy.org) and Take Action!
